An unfortunate error occurred in the first sentence of Section 2.1. This sentence should read: The N-terminal (N-PAG) and C-terminal (C-PAG) baits were generated by inserting into the pEG202 (pLexA) vector [15] the coding sequences for amino acid residues 68–392 and 347–602, respectively, of the human glutaminase full-length cDNA cloned from ZR-75 breast cancer cells [11]. In Fig. 1 the box representing the N-bait, the number 1 should be substituted by 68.
